The Fastest Processing Capacity in the world*

The FCR PROTECT CS Plus and FCR XG 5000 Plus have realized the world's fastest processing speed of 120 IPs/hr., a remarkable progress from the previous 103 IPs/hr. These two models reduce the examination time drastically, ensuring stress-free workflows.

* AS of end of August 2012 (according to Fujifilm's research)

A Multi-purpose FCR

The FCR Plus series now enables processing of pantomography exposures* (15 × 30 cm), in addition to standard and long-view exposures, making a wider range of examinations possible.

* 15 × 30 cm IP needs optional IP Adapter

Enhanced Image Processing

"Image Intelligence™" – a set of sophisticated digital image-processing software technologies available through Fujifilm's Console – processes image data and optimizes final output.

FNC Flexible Noise Control

Provides a non-grainy image by mainly isolating and suppressing the noise for the signal.

GPR Grid Pattern Removal

Removes the stationary grid patterns thus preventing Moiré from being generated resulting in easier diagnosis.

MFP*1 Multi-Frequency Processing

Enhances FCR images. All diagnostic scopes will be enhanced except for noise.

PEM*2 Pattern Enhancement Processing for Mammography

As an optional software specifically developed for mammographic imaging, PEM enhancement processing improves the conspicuity of micro-calcifications.

*2 Optional function for MAMMOASCENT AWS-c, CONSOLE ADVANCE and CR Console

*1 Optional function for CONSOLE ADVANCE and CR Console

XG5000 Plus

A highly-efficient general-purpose FCR reader that offers superior quality images and comfortable workflow for medical staff.

Dual-Side Reading Technology

The Dual-Side Imaging Plate (IP) Reading technology allows the use of a thicker phosphor layer on the transparent base, thereby increasing DQE (Detective Quantum Efficiency) by collecting the emissions from both sides of the IP.

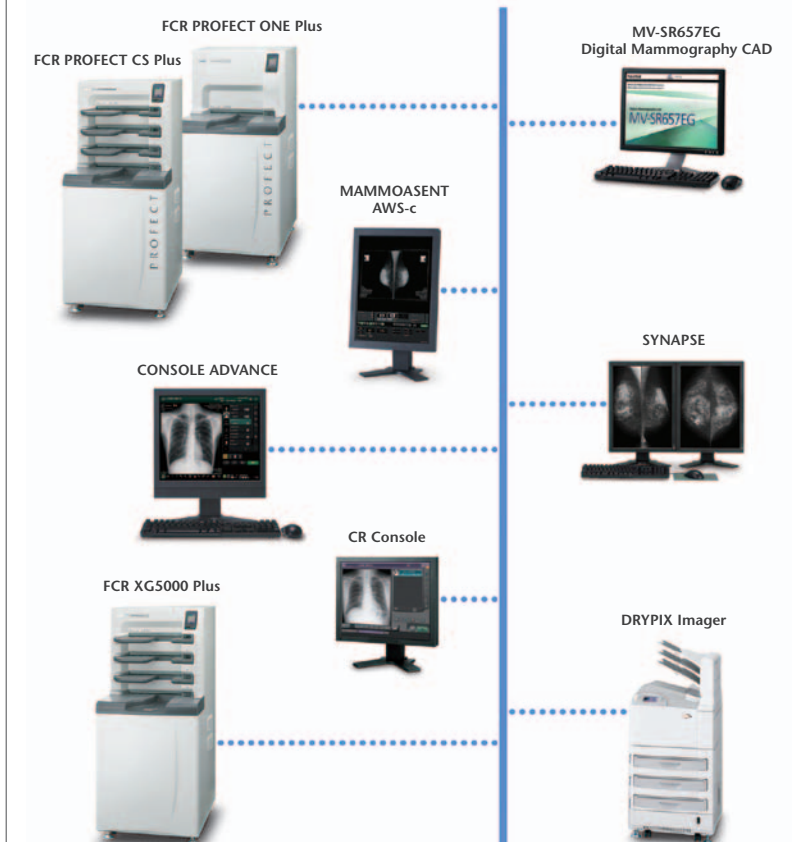

High-precision Images for Various Needs

As High DQE is realized by the FUJIFILM's Dual-side Reading Technology, with its low dose exposure, the FCR PROTECT CS Plus and the FCR PROTECT ONE Plus relieve patients' burden during X-ray examinations. Incorporated with the FUJIFILM proprietary image processing technology (Image Intelligence™), high resolution image reading with the 20 pixel/mm sampling pitch delivers excellent quality images in versatile diagnosis areas. For example, they are suitable for diagnosis areas requiring high-quality images even with low dose exposure, such as mammography, pediatrics, follow-ups and tests using a catheter.

FCR System Configuration

Optimal configurations suited to various applications realize smooth workflow
